Re: Closure Data

Attn: Terrence Conlon

As you requested in your letter I am submitting the Ground-Water Monitoring Results. Therein the ground water gradient, constituent concentrations, data and direction are all given in the report.

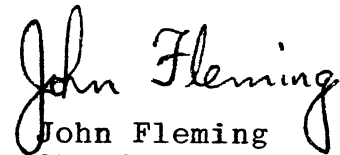

The intent is to close IAW Part 265.228(b).

Enclosed is a copy of a letter from Stablex indicating their having sampled and found acceptable the sludge from the Avco impoundments. Stablex took another sample February 20, 1986 but has not yet indicated the analysis results. I will forward the results as soon as they are available.

Also, please note the enclosed copy, marked with highlite, of a report from the ground water consultant dated over a year ago indicating the method of analysis has been purge-and-trap.

If you have any questions please do not hesitate to contact me.

Sincerely,

John Fleming
Chief
Environmental Engr.
